DATE MAILED: 03/29/2006				

Please find below and/or attached an Office communication concerning this application or proceeding.

Art Unit: 2622

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

New claims 102-113 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In all four independent claims 102, 105, 108 and 111, applicant recites the feature of a receiver (or controller) that “*automatically activates* a (said) program” (or data) based on certain transmitted data. However the original disclosure nowhere specifies that a program (or data) is activated *automatically* based on transmitted data. The receiver stage may download certain programming or data in response to initial setting up or user prompting, according to the original disclosure, but nowhere is it described that the receiver “automatically” activates the programming. In fact, the term “automatically” is nowhere found in the disclosure.

Extending this to dependent claims 104, 106, 110 and 113 where the phrase is repeated, these claims also recite that the automatic activation requires no manual data entry to the receiver. The receiver must first be turned on (typically by user prompting) in order to be operational thereafter. Applicant’s original disclosure does not address this procedure.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2622

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 102-113 are rejected under 35 U.S.C. 102(e) as being anticipated by Diehl et al.

The system of Diehl includes a transmitting end (noting elements 11-14 in Fig. 1) that transmits format information to a receiving end (station comprising components 15-18). The format information transmitted by Diehl includes program identification data and starting time information is transmitted with the program itself (e.g. col. 1 lines 40-44), which data inform the receiving end of which program and what time the program starts (the processing of the program involving recording thereof). The receiving arrangement automatically activates the program (i.e. the receiver presumably being initially powered up) for processing based on the auxiliary format information data (col. 1 lines 56-65), thereby meeting claim 102.

As for claim 105, the claimed “processing term” is met by the starting time of Diehl.

As for claims 108 and 111, the control means is met by the arrangement of elements 22, 25 and 29 of the receiver.

Regarding claims 103, 107, 109 and 112, Table I lists the various format data appended to the program inserted by element 13 at the transmitter, which data includes flags (col. 3 line 46).

As for claims 104, 106, 110 and 113, the receiver automatically activates the program for recording without user intervention, as noted above.

Art Unit: 2622

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor R. Kostak whose telephone number is (571) 272-7348. The examiner can normally be reached on Monday - Friday from 6:30am-3:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David W. Ometz can be reached on (571) 272-7593. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
